

Introduction to C - Problems #3

1. Prompt the user for integers until they type zero. Output the numbers in reverse order.
2. Prompt the user for integers until they type Control-D (Control-Z on windows). Then ask the user for another integer. Output whether the number was one they previously typed in. (**fscanf return is EOF**)
3. Prompt the user for a c-string. Separate the string by spaces. Output the words in reverse order AND the letters in each word in reverse order.
