Introduction to C - Problems #2

1. Prompt the user to an integer. Output the integer times 50. **(fscanf requires ADDRESSES!)**

2. Prompt the user for integers until they type zero. Output the average.

3. Prompt the user for a sentence. Output all words in the sentence on separate lines. (Use '\0' to help)

4. Prompt the user for integers until they type zero. Output the numbers in reverse order.
